DDS&T Communications Requirements Coordinator

SUBJECT: Domestic Frequency Assignments (see attachment)

The Office of Communications is attempting to update their records of Agency-utilized RF frequencies in the United States. O/C works through an inter-agency committee with the FCC to obtain frequency assignments for Domestic Transmission Systems. This is to attempt to prevent interference among U. S. Government users and the private sector. The intent in this cataloging exercise is not to deny the Agency any frequencies, but rather to document them with the FCC in order to expeditiously handle any complaints of interference. The types of equipment/systems which should be included are permanent/fixed site transmitters (microwave, UHF, VHF, HF, circuits, etc.), and mobile systems and small with output power in excess of 10-15 watts. Satellite uplink/downlink frequencies are not to be catalogued in this survey. Should there be any question about what equipment/frequencies to include contact the O/C representatives listed in the attachment for clarification. Please provide your responses to the Planning and Resources Staff by 8 November.
